

## **BKL Mounts, Rings and Adapters Return to Market**

*July 6, 2009 (Ft. Worth, TX)*

Auto-Numatic Corp, the parent company of AirForce Airguns, is proud to announce the acquisition of the assets of BKL Technologies, which manufactured a full line of air rifle and rimfire scope mounts popular among target shooters. Auto-Numatic plans to keep the BKL name as it denotes quality, variety and innovation in airgun and rimfire mounts the same way AirForce denotes quality, accuracy and power for the premium airgun market.

BKL operations have been moved to the main production facility in Fort Worth, Texas and will be manufactured in the USA. All mounts, rings and adapters are manufactured from aircraft grade aluminum alloy. They are available in a wide range of configurations geared specifically for air guns and rimfires for both 1 inch and 30mm riflescopes.

BKL accessories are designed to fit all standard 11 mm airgun rails as well as 3/8 inch rails on rimfire rifles. The one piece design allows easy mount and dismount and is self aligning as it is tightened into position thanks to the BKL patented system. The scope rings are radius contoured to prevent damage to the scope when mounting. Also in the product family is the BKL Picatinny type rail adapter. This adapter is one of the most popular BKL products, and now more so given the proliferation of Picatinny rail accessories.

In the past the product line has been plagued by popularity but lack of availability. Auto-Numatic is now adapting the line to in house state of the art high volume production equipment to ensure future availability while maintaining quality and consistency.

*Auto-Numatic is the Texas based parent company of AirForce Airguns and BKL Technologies. AirForce Airguns revolutionized the airgun world with the first US manufactured pre-charged pneumatic airgun in 1998. AirForce is now an established leader in the design and manufacture of high performance adult airguns. BKL has revolutionized professional quality mounting systems for airguns and rimfire rifles. Auto-Numatic Corporation's headquarters and production facilities are located in Fort Worth, Texas.*
